Gulfco Zone C boring photos.

Hi Gary –

Per our telephone conversation on Friday, attached are some photographs of the soil core from the MW32C boring. As I mentioned, this boring showed predominantly clay from 45 to 80 feet. The Zone C interval is the shell layer at approximately 73 feet shown on Photo No. 52. Please let me know if you have any questions or would like me to send hard copies of these photos. Sorry about the file sizes of some of these.

Thanks.
